Comments: Nuclear power is one of the cleanest, safest reliable energy sources we have. I'm in favor of more nuclear power plants. I also believe one location for spent fuel is ideal. Once assemblies have been stored in a spent fuel pool they decay off more than half. While they are still radioactive, by the time they are shipped to Yucca, they've decayed even more. I'm confident this is the best way to store high-level waste. I believe the testing and analysis done on the casks to ship used fuel are extensive and were done with safety in mind and meet all criteria.

I also believe Yucca Mtn. testing is adequate and that there's no harm to the public by shipping or storing at Yucca Mtn.

Thank you for allowing me to voice my opinion.

Suan E. Maycock
